#### UPDATED TRAFFIC AND PARKING STUDY FOR THE SURFLINER INN PROJECT -CITY OF CARPINTERIA

Associated Transportation Engineers (ATE) has prepared the following updated traffic and parking study for the proposed Surfliner Inn Project (the "Project") in the City of Carpinteria. The study evaluates the Project's parking demands, reviews the existing and future supply parking demands in the Downtown Carpinteria area, and evaluates the traffic operations for the new Lot 4. The updated study addresses the comments provided by City staff on the ATE traffic and parking studies dated October 13, 2023, February 12, 2024, and May 6, 2024.

#### **PROJECT DESCRIPTION**

The Project is proposing to construct a 37-room (36 rooms and 1 managers unit) boutique hotel on the eastern portion of the City's Public Parking Lot 3 located adjacent on the west side of Linden Avenue north of the Union Pacific Railroad (UPRR) tracks. The hotel facility would include a 2,252 SF cafe, a 245 SF visitor center, a 1,150 SF rooftop bar area, and a 1,695 SF bar event space on the rooftop. The Project site plan is illustrated in Figure 1 (attached). Table 1 presents the statistics for the Project.

Parking Lot 3 currently contains 113 spaces. With the construction of the Project, the total parking supply in Lot 3 would be reduced to 46 spaces. The net loss of parking in Lot 3 resulting from the Project would be 67 spaces. The Project is also proposing to construct a new City parking lot (Lot 4) south of the UPRR tracks, which would contain 93 spaces as shown in Figure 1. The total number of parking spaces provided in both Lots 3 and 4 would be 139 spaces, which would provide an additional 26 spaces than what is currently available in Lot 3.

| Land Use                                    | Size  |
|---|---|
| Hotel                                       | 36 Rooms<br>1 Managers Unit                 |
| Cafe (a)                                    | 2,252 SF (b)                                |
| Rooftop Bar                                 | 1,150 SF (b)                                |
| Visitor Center                              | 245 SF                                      |
| Bar Event Space                             | 1,695 SF (b)                                |

#### SURFLINER INN SHARED PARKING DEMAND ANALYSIS

Walker Consultants, commissioned by the City of Carpinteria, completed the Downtown Carpinteria Parking Study ("Walker Study") in 2020.<sup>1</sup> The Walker Study contains a parking demand analysis for the Surfliner Inn Project based on data presented the Urban Land Institute (ULI) Shared Parking Report (3<sup>rd</sup> edition).<sup>2</sup> The Walker Study applied several different factors to develop the parking demand estimates pursuant to the ULI methodologies. The ULI analysis included driving ratio adjustments based on the Project's proximity to the rail as well as the general walkability of downtown. "Non-captive" ratios were also applied to account for the likelihood that a portion of cafe, visitor center, and rooftop bar patronage would be hotel guests. The Walker Study calculations are attached for reference.

ATE updated the Walker Study calculations based on the current Project land use statistics shown in Table 1. As requested by City staff, the new parking demand estimates were developed based on the same methodology as the Walker Study. Table 2 shows the updated weekday and weekend parking demand estimates for the current Project based on the ULI rates. It is noted that the visitor center does not generate parking demand due to the relatively small size. It is noted by City staff that on-street parking on 5<sup>th</sup> Street can be used for the visitor center. City staff also indicated that a 24-foot minimum green zone space could be utilized for the visitor center.

|                             | Weekday   | Weekend   |
|-----------------------------|-----------|-----------|
| Land Use                    | (7:00 PM) | (7:00 PM) |
| Hotel                       | 19 Spaces | 22 Spaces |
| Manager's Unit              | 1 Space   | 1 Space   |
| Cafe                        | 15 Spaces | 15 Spaces |
| Rooftop Bar                 | 5 Spaces  | 5 Spaces  |
| Visitor Center              | 0 Spaces  | 0 Spaces  |
| Bar Event Space             | 16 Spaces | 11 Spaces |
| Total Shared Parking Demand | 56 Spaces | 54 Spaces |

Table 2 Surfliner Inn Peak Shared Parking Demand - ULI

The data presented in Table 2 show that the peak shared parking demands forecasts for the Project are 56 spaces on the weekdays and 54 spaces on the weekends using ULI rates.

## FUTURE PARKING DEMANDS – LOTS 3 AND 4

The Walker Study analyzed all public parking within the "Downtown T", which includes Carpinteria Avenue and Linden Avenue, as well as parking within a few blocks east and west of Linden Avenue. The study also contained a focused evaluation on the existing and future parking demands forecast for Lots 3 and 4. The Walker Study provided a summary of existing parking conditions, documented weekday and weekend occupancy rates, and analyzed the future parking demands related to three proposed downtown projects. The following section reviews and updates this analysis.

#### Parking Supply – Lots 3 and 4

As noted previously, the parking supply in Lot 3 will be reduced from 113 spaces to 46 spaces. The Project proposes to construct Lot 4 with 93 spaces just south of the UPRR tracks. Lot 4 would be accessed from the existing driveway on Linden Avenue and would extend west from Linden Avenue to Elm Avenue. A total of 139 parking spaces would be provided between Lots 3 and 4.

#### **Existing Conditions – Lot 3**

The Walker Study conducted weekday and weekend parking occupancy surveys within the downtown parking lots (including Lot 3) and surface streets. The surveys found that Lot 3 had a peak occupancy of 55 spaces (49% occupied) on weekdays and 67 spaces (59%) on weekends.

Additional parking surveys were conducted in Lot 3 by the applicant team to confirm the Walker Study data (survey data attached). The additional parking data indicates that the Walker Study results generally represent peak weekday and weekend conditions within Lot 3.

## **Future Conditions**

There are two additional development projects currently proposed in the downtown area in addition to the Surfliner Inn Project that could affect parking in Lots 3 and 4. The 700 Linden Project is an approved mixed-use retail, office, and restaurant development located on the east side of Linden Avenue between 7<sup>th</sup> Street and 8<sup>th</sup> Street. The 700 Linden Project would provide 20 parking spaces onsite and will be allocated up to 28 spaces in Lots 3 and 4. The other development is the expanded rail service at the existing Carpinteria Amtrak Station. The rail service expansion includes the construction of a second track and platform at the existing station that would increase service from five to seven trains in each direction. The expanded rail service is expected to increase parking occupancy in Lots 3 and 4 by up to 7 spaces on weekdays and up to 9 spaces on weekends.

Tables 3 and 4 show the Future weekday and weekend parking demand estimates for Lots 3 and 4, respectively. The tables assume development of the Surfliner Inn and the two additional downtown projects (parking calculations attached).

| Surfliner Inn  | 46    | 47    | 47   | 48   | 42   | 41   | 46   | 54   | 54   | 52   |  |  |  |
| 700 Linden     | 4     | 12    | 15   | 14   | 7    | 2    | 6    | 12   | 9    | 8    |  |  |  |
| Amtrak         | 6     | 6     | 6    | 6    | 9    | 9    | 7    | 7    | 6    | 6    |  |  |  |
| Total          | 104   | 113   | 118  | 118  | 125  | 119  | 113  | 127  | 118  | 115  |  |  |  |
| Parking Supply | 139   | 139   | 139  | 139  | 139  | 139  | 139  | 139  | 139  | 139  |  |  |  |
| Extra Spaces   | 35    | 26    | 21   | 21   | 14   | 20   | 26   | 12   | 21   | 24   |  |  |  |

The data presented in Tables 3 and 4 show that the future weekday parking demand in Lots 3 and 4 is 139 spaces and the future weekend parking demand forecast is 127 spaces. The 139 spaces provided would satisfy these parking demand and provide no extra spaces on the weekdays and 12 extra spaces on the weekends.

It is noted that the Walker Study indicated that the downtown area would experience an overall utilization of 84% during the peak weekday parking demands at noon, assuming that no new spaces were constructed by the City. This indicates that the existing downtown parking supply could support the three proposed projects, as peak utilization is below the targeted threshold of 85%. The Walker Study also indicated that parking management strategies could be implemented to reduce parking constraints and alleviate impacts on residential areas resulting from higher parking demand if needed.

#### PARKING PHASING

As noted previously, Lot 3 currently contains 113 spaces and experiences peak parking demands of 55 spaces on weekdays and 67 spaces on weekends. To ensure that adequate parking is provided during the construction phase of the Project Lot 3, Lot 4 will be constructed prior to the commencement of Project construction to provide an additional 93 spaces. The parking supply would therefore be adequate throughout the construction and operational phases of the Project.

## TRAFFIC OPERATIONS

Traffic counts were conducted at the existing Lot 3 to determine peak hour flows in and out of the lot. The peak one-hour volumes observed at the lot were divided by the number of spaces provided to determine a traffic generation rate per space. The study found that the existing Lot 3 generates 0.18 trips per space during the peak hour (11:30 AM – 12:30 PM). Based on this rate, the new Lot 4 with 93 spaces would generate approximately 15 peak hour trips. It is anticipated that most traffic accessing Lot 4 would be oriented to and from the downtown area north of the UPRR tracks, with very little traffic oriented to the south. Most of the traffic flows at the driveway would therefore be right-turns in and left-turns out. Given the current level of traffic on Linden Avenue south of the UPRR tracks (approximately 300 peak hour trips), the Lot 4 driveway would operate in the level of service (LOS) A range, with very little delay and queuing for vehicles entering and exiting the parking lot driveway.

It is noted that there is a UPRR rail crossing gate arm located north of the Linden Avenue driveway. There is sufficient storage space for two vehicles between the stop bar at the rail crossing arm and the driveway for Lot 4. This storage area would be sufficient given the level of traffic that would be generated by Lot 4.

This concludes ATE's updated traffic and parking study for the Surfliner Inn Project.
